

IN THE CLAIMS:

Please amend Claims 78 and 88 as follows:

Claims 1-77. (Cancelled)

1 78. (Currently Amended) An audio/video reproducing apparatus connectable to a communications network for selectively reproducing items of audio/video material from a recording medium, the reproducing apparatus comprising:

C1 a control processor which is arranged in use to receive data representing a request for a selected audio/video material item via a first network interface connectable to a first communications network, the data representing the request including metadata indicative of the selected audio/video material item; and

a reproducing processor coupled to the control processor and arranged in response to signals identifying said selected audio/video material items from said control processor to reproduce said audio/video material item, the audio/video material item being communicated via a second network interface connectable to a second communications network for communicating said items of audio/video material, said second communications network having a higher bandwidth than said first communications network.

2 79. (Previously Presented) An audio/video reproducing apparatus as claimed in Claim 78, wherein said first network interface is arranged to operate in accordance with a data communications network standard selected from the Ethernet, RS 322 and RS 422 standards.

3 80. (Previously Presented) An audio/video reproducing apparatus as claimed in Claim 78, wherein said second network interface is arranged to operate in accordance with the Serial

Digital Interface (SDI) or the Serial Digital Transport Interface (SDTI).

4  
1 ~~81~~. (Previously Presented) An audio/video reproducing apparatus as claimed in Claim ~~78~~, wherein said metadata is at least one of UMID, tape ID and time codes, and a Unique Material Reference Number, identifying the material items.

5  
1 ~~82~~. (Previously Presented) An audio/video reproducing apparatus as claimed in Claim ~~78~~, wherein said reproducing apparatus comprises a plurality of audio/video recording/reproducing apparatus each of which is coupled to said control processor via a local data bus.

6 5  
~~83~~. (Previously Presented) An audio/video reproducing apparatus as claimed in Claim ~~82~~, wherein said local bus includes a control communications channel for communicating control data to and/or from said control processor, and a video data communications channel for communicating said items of audio/video material from said plurality of audio/video recording/reproducing apparatus to said communications network.

7 1  
~~84~~. (Previously Presented) An audio/video reproducing apparatus as claimed in Claim ~~78~~, further comprising a display device which is arranged in operation to display images representative of said audio/video material items present on said recording medium.

8 7  
~~85~~. (Previously Presented) An audio/video reproducing apparatus as claimed in Claim ~~84~~, wherein said display device is a touch screen coupled to said control processor, and arranged in

use to receive touch commands from a user for selecting said items of audio/video material.

9  
86. (Previously Presented) An audio/video reproducing apparatus as claimed in Claim 78,  
wherein said control processor is arranged to generate data representing a material identifier for  
each of said audio/video material items, from data recorded with said audio/video material items  
on said recording medium.

10 9  
87 (Previously Presented) An audio/video reproducing apparatus as claimed in Claim 86,  
wherein said material identifier is a UMID.

C1  
15  
88. (Currently Amended) A method of reproducing items of audio/video material from a  
recording medium, comprising the steps of:

communicating metadata identifying a selected item of audio/video material via a first  
communications network;

receiving said identifying metadata at an audio/video reproducing apparatus in which said  
recording medium is loaded;

selectively reproducing said selected item of audio/video material from said recording  
medium in accordance with said identifying metadata; and

communicating said selected item of audio/video material via a second communications  
network in response to said identifying metadata, said second communications network having a  
higher bandwidth than said first communications network.

17  
89. (Previously Presented) A video processing apparatus for processing video signals

representing images, said apparatus comprising:

an activity detector which is arranged in operation to receive said video signals and to generate an activity signal indicative of an amount of activity within the images represented by the video signal; and

an image generator coupled to the activity detector which is arranged in operation to receive said video signal and said activity signal and to generate sample images at temporal positions within said video signal, which temporal positions are determined from said activity signal, wherein said activity signal is representative of a relative amount of activity within the images represented by said video signal and said image detector is arranged in operation to produce more of said sample images during periods of greater activity indicated by said activity signal.

18

17

90. (Previously Presented) A video processing apparatus as claimed in Claim ~~89~~, wherein said sample images are represented by a substantially reduced amount of data in comparison to said images represented by said video signal.

19

17

91. (Previously Presented) A video processing apparatus as claimed in Claim ~~89~~, comprising

a reproduction processor which is arranged in operation to receive a recording medium on which said video signals are recorded and to reproduce said video signals from said recording medium.

20

19

92. (Previously Presented) A video processing apparatus as claimed in Claim ~~91~~, wherein

said image generator is arranged in operation to generate, for each of said sample images a material identification representative of a location on said recording medium where the video signal corresponding to said sample images are recorded.

21

17

93. (Previously Presented) A video processing apparatus as claimed in Claim 89, comprising a display device for displaying said sample images.

22

17

94. (Previously Presented) A video processing apparatus as claimed in Claim 89, wherein said display device is arranged to display said sample images at locations on said display device which are representative of the location on said recording medium at which said sample images are recorded.

23

17

95. (Previously Presented) A video processing apparatus as claimed in Claim 89, wherein said activity detector generates said activity signal by forming a histogram of colour components of said video image and determining a rate of change of said colour components.

24

17

96. (Previously Presented) A video processing apparatus as claimed in Claim 89, wherein said activity detector generates said activity signal from motion vectors of image components of said video image signal.

25

97. (Previously Presented) An editing system having a database connected to a communications channel and a video processor as claimed in Claim 89, wherein the video processor includes a communications device for communicating the sample images to said database via the communications channel, said sample images being stored in said data base.

24

98. (Previously Presented) An audio/video processing apparatus for processing video signals which include associated audio signals representative of sound including speech, said apparatus comprising:

a speech analysis processor which is arranged in operation to generate data identifying speech detected within said audio signals;

an activity processor coupled to said speech analysis processor and arranged in operation to generate an activity signal in accordance with the data identifying speech present in said audio signal;

C 1 a video processing apparatus operable to generate sample images from a video signal in response to said activity signal; and

a content information generator coupled to said activity processor, said speech analysis processor and said video processing apparatus and arranged in operation to generate data representing the content of said speech at temporal positions within said audio signal determined by said activity signal, wherein sample images are generated at the temporal positions indicated by said activity signal with said speech content data.

27

99. (Previously Presented) An audio/video processing apparatus as claimed in Claim 98, wherein said activity signal is indicative of the start of a speech sentence, said speech content data representing text data being generated at the start of the sentence.

26

256

100. (Previously Presented) An audio/video processing apparatus as claimed in Claim 98, wherein said activity signal is indicative of a first time a person included in the content of said

26

video signal speaks, said speech content data representing text data generated for the first speech of the person.

29

24

101. (Previously Presented) An audio/video processing apparatus as claimed in Claim 98, comprising a reproduction processor which is arranged in operation to receive a recording medium on which said video and said associated audio signals are recorded and to reproduce said audio signals from said recording medium.

30

C / 29 102. (Previously Presented) An audio/video processing apparatus as claimed in Claim 101, wherein said content information generator is arranged in operation to generate, for each of said sample images a material identification representative of a location on said recording medium where the audio signals corresponding to said speech content data are recorded.

31

30

103. (Previously Presented) An audio/video processing apparatus as claimed in Claim 102, wherein said speech content data is representative of text corresponding to the content of the speech.

32

31

104. (Previously Presented) An audio/video processing apparatus as claimed in Claim 103, comprising a display device for displaying said text.

33

32

105. (Previously Presented) An audio/video processing apparatus as claimed in Claim 104, wherein said display device is arranged to display said text with respect to a location on said display device which is representative of a location on said recording medium at which said text

is recorded.

34  
106. (Previously Presented) An audio/video processing apparatus as claimed in Claim 98,

comprising a communications processor which is arranged in operation to communicate said speech content data.

35  
107. (Previously Presented) An editing system having a database connected to a communications channel and an audio/video processor as claimed in Claim 98, wherein the audio/video processor includes a communications device for communicating the sample images

C1 and said speech content data to said database via the communications channel, said sample images being stored in said data base with the speech data.

36  
108. (Previously Presented) An audio/video processing apparatus as claimed in Claim 98,

wherein the video processing apparatus comprises:

an image activity detector which is arranged in operation to receive said video signals and to generate an image activity signal indicative of an amount of activity within the images represented by the video signal; and

an image generator coupled to the image activity detector which is arranged in operation to receive said video signal and said image activity signal and to generate sample images at temporal positions within said video signal, which temporal positions are determined from said image activity signal, wherein said image activity signal is representative of a relative amount of activity within the images represented by said video signal and said image detector is arranged in operation to produce more of said sample images during periods of greater activity indicated by

said activity signal.

37  
109.

(Previously Presented) A method of processing video signals, comprising the steps of:

receiving video signals;

generating an activity signal indicative of an amount of activity within the images represented by the video signal;

generating sample images at temporal positions within said video signal, which temporal positions are determined from said activity signal, wherein said activity signal is representative of a relative amount of activity within the images represented by said video signal, and said generating the sample images comprises:

producing more of said sample images during periods of greater activity indicated by said activity signal.

38  
110.

(Previously Presented) A method of processing video signals which include associated audio signals representative of sound including speech, said method comprising the steps of generating speech data identifying speech detected within said audio signals, generating an activity signal in response to said speech data, and generating sample images from a video signal in response to said activity signal, wherein said generating said speech data comprises generating data representing the content of said speech at temporal positions within said audio signal determined by said activity signal, wherein sample images are generated at the temporal positions indicated by said activity signal with said speech data.

39  
111.

(Previously Presented) A system for editing audio/video productions, comprising:

an ingestion processor having means for receiving a recording medium and being arranged in use to reproduce selectively audio/video material items from said recording medium in response to meta data identifying the selected audio/video material items;

a database operable to receive and to store content meta data describing the contents of said audio/video material items on said recording medium in association with meta data identifying the audio/video material items; and

an editing processor coupled to said ingestion processor and said database, said editing processor having a graphical user interface for displaying a representation of said content meta data stored in said data base and for selecting said audio/video material items from said displayed representation of said content meta data, said editing processor being arranged to combine user selected items of audio/video material, which are selectively reproduced by said ingestion processor in response to the identifying meta data corresponding to said selected items of audio/video material being communicated to said ingestion processor by said editing processor.

<sup>40</sup>  
~~11~~2. (Previously Presented) A system as claimed in Claim ~~11~~1, wherein said editing processor is coupled to said database and said audio/video reproducing apparatus via a data communications network.

<sup>41</sup>  
~~11~~3. (Previously Presented) A system as claimed in Claim ~~11~~2, wherein said data communications network comprises:

a first communications channel coupled to said editing station, said database and said ingestion processor for communicating said identifying metadata; and

a second communications channel coupled to said editing station, said database and said

ingestion processor for communicating said items of audio/video material.

42  
114. (Previously Presented) A system as claimed in Claim 113, wherein said first network interface is arranged to operate in accordance with a data communications network standard selected from the Ethernet, RS 322 and RS 422 standards.

43  
115. (Previously Presented) A system as claimed in Claim 113, wherein said second network interface is arranged to operate in accordance with the Serial Digital Interface (SDI) or the Serial Digital Transport Interface (SDTI).

C1  
44  
116. (Previously Presented) A system as claimed in Claim 111, wherein said identifying meta data includes at least one of UMID, tape ID and time codes, and a Unique Material Reference Number, identifying the material items.

45  
117. (Previously Presented) A system as claimed in Claim 111, wherein said content meta data includes sample images representing the content of the audio/video material items at sample temporal positions within said audio/video material items.

46  
118. (Previously Presented) A system as claimed in Claim 111, wherein said recording medium includes said content metadata describing the content of the audio/video material items recorded on to said recording medium, and said ingestion processor is arranged in operation to reproduce said content meta data and to communicate said content meta data via said network to said database, said database operating to receive and to store said content metadata.

47

119. (Previously Presented) A method of generating an audio/video production by selecting and combining items of content meta data, said method comprising the steps of:

- loading a recording medium on which items of audio/video material are recorded into an ingestion processor;
- reviewing content meta data describing the content of the audio/video material items on said recording medium; and
- consequent upon said review, selecting content meta data corresponding to a desired selection of audio/video material items,
- selectively retrieving items of audio/video material from said recording medium to form said audio/video production, in accordance with meta data identifying the selected audio/video material items associated with the content meta data.

48

47

120. (Previously Presented) A method as claimed in Claim 119, further comprising the step of loading content metadata describing the content of the audio/video material items into a database; wherein the step of reviewing the metadata comprises the step of interrogating said database.

49

48

121. (Previously Presented) A method as claimed in Claim 120, wherein said content metadata and said identifying metadata are present on said recording medium with said items of audio/video material, and said method comprises the steps of:

- ingesting said content meta data and said identifying metadata using said ingestion processor;
- communicating said content meta data and said identifying meta data to said database; and
- storing said content meta data in association with said identifying meta data in said

database.

11  
122. (Previously Presented) A computer program providing computer executable instructions, which when loaded onto a data processor configures the data processor to operate as an audio/video reproducing apparatus according to Claim 78.<sup>1</sup>

120  
C1 123. (Previously Presented) A computer program providing computer executable instructions, which when loaded on to a data processor causes the data processor to perform the method according to Claim 88.<sup>15</sup>

122  
124. (Previously Presented) A computer program product having a computer readable medium recorded thereon information signals representative of the computer program claimed in Claim 122.<sup>11</sup>

123  
125. (Previously Presented) A signal representing audio and/or video material produced by an audio/video reproducing apparatus according to Claim 78.<sup>1</sup>

124  
126. (Previously Presented) A data carrier on which is recorded data representing audio and/or video material produced by an audio/video reproducing apparatus according to Claim 78.<sup>1</sup>
